PART I.
REPORT.
BOMBAY
(TOWN AND ISLAND).

INTRODUCTION.

THE Census of the Town and Island of Bombay was taken as part of the Census of India on the night of the 10th March 1911. Although the condition of the City was not abnormal on that date, the unfortunate circumstances under which the Census was taken in 1901 with a virulent epidemic of plague raging through the City preclude the drawing of comparisons between 1901 and 1911. This review of the Census figures will therefore be confined generally to an exegesis on the statical and not the dynamical aspect of the statistics.

The final test shows that the population of our City is 979,445, just over 203,000 more than in 1901, and 1,623 more than the figures revealed by the Municipal Census taken in 1906 by the Health Department of the Municipality who required something more authentic than the vitiated statistics of the Imperial Census for the proper administration of their department. This is the first instance in India of a quinquennial census being taken, but it is unlikely that it will be repeated, although a census every five years is recommended by the statisticians of Europe.

The preliminary record was complete five days before the Census night, having been prepared by Dr. J. A. Turner, the Executive Health Officer of the Municipality, this being his second census. Mr. P. P. Vágh had the direct supervision of the arrangements. It may not be out of place to mention that this was the third census, with the direction of which Mr. Vágh had been closely connected. His experience on previous occasions conduced in no small measure to the smoothness with which all details were carried out. For the last five days with the aid of Government servants, volunteers and scholastic institutions the schedules were carefully checked and everything was ready for the final check on the night of March 10th. In 1901, thanks to the initiative of Mr. E. D. Talati, school-boys carefully trained into census squads were utilized for the first time. There was a great extension of this on the present occasion and sixteen schools took part in the final enumeration and the previous five days of checking. By this agency 97,962 persons, just over 10 per cent. of the population, were enumerated. The work was of course not equal, some of it was much better done than the rest, but there is no doubt that a well-trained squad working under supervision is a most useful adjunct to the means available for enumeration.

In addition to the schools some nineteen mercantile firms, both European and Indian, lent the services of clerks for the final enumeration. In several other instances volunteers came forward and agreed to take complete charge of the enumeration of certain areas, providing their own staff.

The innovation of using a general schedule, and filling in the details by means of enumerators instead of permitting the householder to fill in the entries himself, was made in 1901 with some diffidence, and trouble was anticipated in some of the turbulent quarters of the City. Thanks, however, to the personal influence of Mr. Edwardes, there was no difficulty. Since then there has been a Municipal Census in 1906 and the Musalmán population are getting accustomed

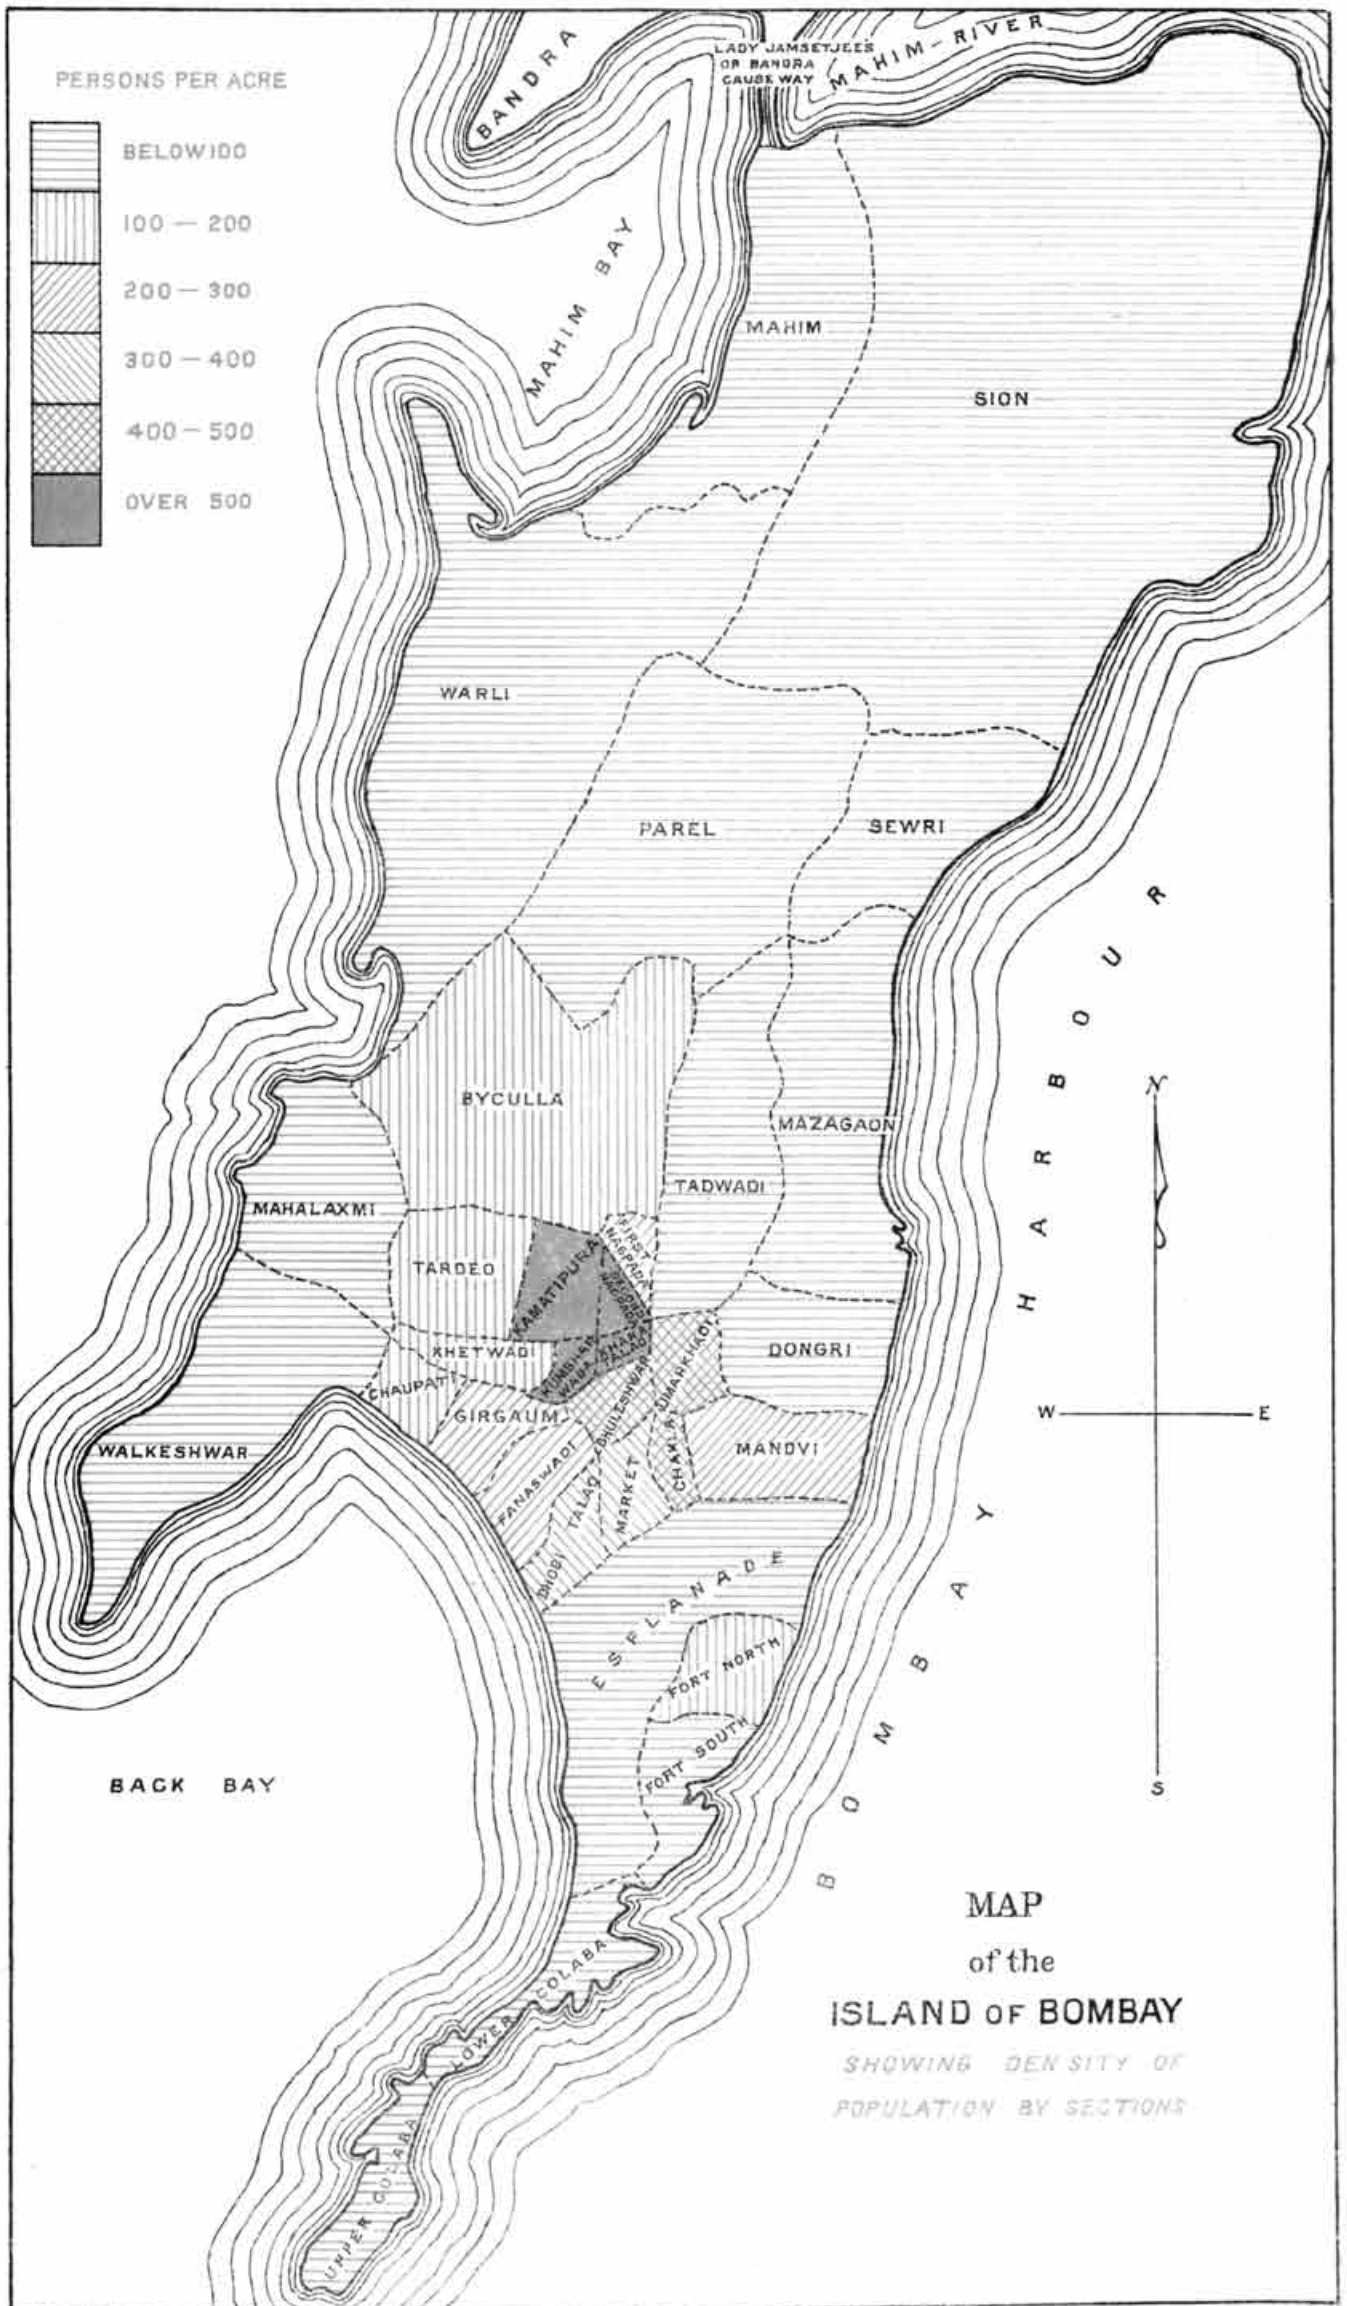

to enumerations and no trouble was anticipated. But to make assurance doubly sure Mr. Edwardes' kind offices were again enlisted and the cooperation of the heads of the Jamáts obtained beforehand.

The Police took charge of the enumeration of the homeless. All railway arches, maidans and alleys were searched and the sleepers marshalled into gangs and taken off to fixed enumeration stations where their particulars were recorded and they were allowed to go away armed with a slip of paper to show that they had been enumerated.

The floating population was enumerated by the agency of the Royal Indian Marine and Mr. C. R. Watkins of the Preventive Service.

The abstraction and compilation work was done in the Poona office.

It is impossible to say yet what the cost of this Census of the City will be, as the composition charges are not yet known, but it is not likely to exceed the sum set apart by the Municipality and an equal contribution from the Government of India.

CHAPTER I.

POPULATION OF THE ISLAND.

1. The population of the Town and Island of Bombay on the night of the **Population.** 10th March was 979,445. When it is remembered that the Census was taken at a time when many had gone off to their homes for the Holi holidays and when there was great depression in the textile industry and many mills had closed down owing to the prohibitive cost of the raw material, it may be taken for granted that except for these interferences the population would have exceeded a million. The area of the island is $14,575\frac{1}{2}$ acres or 330 acres more than it was ten years ago. The increase is due to reclamation from the sea at Colaba, Fort North, Mazagaon and Sewri with the big schemes in progress or in the air. This rate of increase is likely to be maintained.

2. The details of area, houses and population arranged by wards and **Density.** sections will be found in Table I of the Tables which are printed at the end of this report. The population is most concentrated in 2nd Nagpada, Kumbhárwada, Kámátipura and Khára Talao, all of which have more than 550 persons per acre, and most scattered in Sion, Upper Colaba and Walkeshwar, where there are less than 20 to the acre. The reason of this will be evident to any one who knows Bombay; Sion is still largely unreclaimed rice swamps (of which the land won by the G. I. P. Railway for their workshops is only a very small fraction) or salt works, neither of which are capable of supporting a crowded population. Upper Colaba is practically a military reservation and Walkeshwar contains the residential suburb of Malabar Hill. The explanation of the density of 2nd Nagpada and Khára Talao has been given by Mr. Edwardes in the last Census report as being due to their being Muhammadan centres and Muhammadans do not run away from plague. Moreover the Sons of the Prophet have a knack of packing closely together into one quarter, even in mofussil towns. Other overcrowded sections are Bhuleshwar, Chakla, Umarkhádi, all of which show a large Musalman population. These seven sections have been the mostly densely populated for the last thirty years, but recently there has been some re-arrangement of the order of precedence. Second Nagpada now holds the unenviable pride of place and has increased 136 per acre since 1881.

3. The population of Calcutta (excluding Howrah) is 896,067 and subse- **Urbs prima**
quent to the census Glasgow has been attempting to manipulate its boundaries **in Indis.** so as to include a large area of suburbs. Whether the attempt be successful or not, it is certain that so long as the present census figures are current Bombay still justifies her proud boast of being the first city in India and the second in the Empire.

4. The number of occupied houses is 37,932, giving an average of 21 **Houses.** persons in each house. There was no difference in the definition of a house, which was, as in 1901, 'the whole of a building under one undivided roof.' For a detailed disquisition on the term house the reader is referred to page 13 of Mr. Edwardes' Report on the Census of Bombay City in 1901. The largest number of houses are to be found in the northern sections, Warli, Mahim and Sion, but many of these are huts and do not indicate overcrowding. The

fewest houses are to be found in 1st Nagpáda where many small buildings have been pulled down by the operations of the Improvement Trust; Upper Colába where the military quarters take up much of the room and Fort South, which is a business quarter with residential flats.

The number of empty houses has fallen by nearly one thousand, while the total number has risen over 6,000 which testifies to the greatness of the exodus in 1901. The largest number of unoccupied houses is to be found in F and G wards in the north of the island and in Tadwadi, Byculla, and Mazagon but many of these are huts. Lower Colába also shows a large number of untenanted dwellings and so do Walkeshwar and Mahalaxmi.

Harbour, Docks,
etc.

5. The Harbour, Docks, Railways, Military and Homeless show an increase of 7,000, but this is not proportionately greater than the increase of the population and a number would be accounted for by the Port Trust workers. Vagrants have in all probability decreased.

Subjoined below will be found three subsidiary tables giving the

Density of each section in persons per acre since 1881 ;

Average number of houses per acre ;

Number of houses, occupied and unoccupied, on March 10th, 1911.

The density is graphically represented in the map which faces this Chapter.

MAP
of the
ISLAND of BOMBAY

SHOWING VARIATION IN
DENSITY SINCE 1872.

CHAPTER II.

VARIATION IN POPULATION SINCE 1872.

6. Imperial Table II shows the increase or decrease of each section since 1872, which are well exemplified in the map facing this page. Variation since 1872.
Map—Variation.

The Island generally shows an increase of 52 per cent. in the forty years. The centres of habitation have however changed. Twenty-four sections (including the harbour, docks, etc.) show an increase, while 9 show a diminished population. The highest percentage increases are Warli (792), Mahalaxmi (509), Sewri (327), Parel (230), Tadvadi (182), Byculla (169), Sion (165) and Mahim (130). Byculla, Tadvadi and Warli are the three biggest mill centres in the Island, while Parel and Sion, if they have not many mills, come next in the matter of workshops, the G. I. P. Railway shops in particular employing a large number of hands. Sewri, Mahalaxmi and Mahim also have mills and workshops, though they are also residential areas. All these sections lie to the north of the densely congested areas of Kamatipura, Umarchadi and second Nagpada.

7. The principal decreases are to be found in Upper Colaba (53), Esplanade (34), First Nagpada (32), Kamatipura (22) and Fort South (15). Decreases. The decrease in Upper Colaba is misleading and due to the inclusion of the military in the figures of 1901 and their exclusion on the present occasion.

Esplanade and Fort South are big mercantile centres and have not many residential buildings for their size, the Government offices along Back Bay take up a great deal of space, and it is not surprising that the population is receding. The loss in First Nagpada represents the removal of a number of insanitary rookeries and is not a matter for regret.

8. There is clearly a tendency to move out towards the opener and clearer parts in the North of the Island. This tendency has probably been increased by the arrival of plague and will be very rapidly developed when the Eastern Avenue with its better tramway facilities make Sion more accessible as a residential centre. It was once the royal seat of Raja Bimb and possibly it may once again become a residential quarter. Northward movement of residents.

The variations in Tardeo and First and Second Nagpadas are calculated from 1881 only; before that date they formed portions of other sections and were not separately enumerated.

Subsidiary Table IV at the end of this Chapter gives the percentage and details of variations by sections.

It will not be out of place to conclude this chapter with a few remarks on the effect of plague on the City. Since it broke out in 1896 it has been always with us, some years the epidemic has been serious as in 1903 and 1901, at other times it has fallen as low as 3,656 deaths which were recorded in 1910. Plague has accounted for 114,506 deaths in the decennium, and it is permissible to hope that this severe lesson is not being lost on the well-to-do. If plague leads to suburbanization it will have had one good result. So long as a city refuses inoculation its only safety lies in evacuation.

Birth-place and Immigration.

Reasons for low birth-rate.

9. While the above variations show the great increase in the population of the City, it must be remembered that the growth of Bombay is entirely due to the stream of immigrants that replace the wastage inseparable from a big city. In the intercensal period the births registered in Bombay averaged 18,643 annually, while the deaths during the same ten years averaged 44,850. There are several causes for this. In the first place there is a great shortage of married women of child-bearing age compared with the number that there ought to be in a normal community. The number of married women aged 15 to 40 is 150,000. We can take this figure roughly as the number of potential mothers, 27 per cent., of the total married population, whereas the figure for the whole of the Presidency is 35. Secondly, there is a well-established and entirely salutary custom of sending a prospective mother home to her parents, where the baby has a better chance of life. This, however, decreases the birth-rate of the City. And, lastly, if the child is born in Bombay, the fearful child mortality which amounted in 1910 to 288 per 1,000 children, in the first year of life, does not give the infant a fair chance. The mortality on the *registered* births is even greater, 380 per 1,000, but the adjusted figures are here taken as being more in accordance with the real facts. Even these figures, it may be noted, are an improvement on recent years.

Sources of Immigration.

10. Having thus seen that the population is only kept up by a constant supply of humanity from outside it will be of some interest to examine whence it comes. Imperial Table XI, Part III, of the Census Report of the province will be found reproduced here as Table VI, Part III. It gives the place of origin of immigrants from the principal districts that contribute to the city population combined with details of certain occupations.

Of the 979,445 persons which constitute the population of the City, only

Districts or States.	Numbers.	Percentage of population.
DISTRICTS.		
Ratnágiri	216,060	22'06
Poona	71,188	7'27
Sátára	56,754	5'80
Kolába	37,119	3'79
Surat	35,072	3'58
NATIVE STATES.		
Káthiáwár	50,615	5'17
Cutch	36,470	3'72

191,581 or less than 20 per cent. were born in Bombay. This is less than the number sent here by Ratnágiri which is over 22 per cent. The principal districts of the Presidency which keep Bombay supplied are shown in the marginal table, which needs little comment.

From Ratnágiri come most of the salaried menials, the office hamáls and pattáválas of the principal firms, the bulk of the City Police, and lascars. Twenty-seven per cent. of the Ratnágiri born are mill-hands, and D, E, F and G wards are the localities they chiefly favour. Poona and Sátára supply chiefly coolies, cartmen and mill-hands. These are the people who are collectively termed Ghátis and may some day develop into a separate caste. The Poona people haunt B and E wards, while the Sátára-born congregate in C, E and G. Kolába sends to E and G wards coolies, mill-hands and artizans of various kinds. From Surat come the Suratí domestics of A ward and also artizans, coolies and shop-keepers, most of whom are to be found in C and D wards. From the Native States in Káthiáwár and from Cutch come the shop-keepers and artizans of B and C wards.

11. Outside the Presidency the principal stream of immigration sets in from the United Provinces which send us over 50,000, principally to the mills of Byculla and Tadwadi. Most of them come from the districts of Allahabad, Jaunpur and Azamghar. Rájputána is a poor second with 12,000, mostly shop-keepers in C ward from Jodhpur and Jaipur. The news that there was money to be made in keeping a shop in C ward seems to have spread to the neighbouring district of Merwára. We now find 6,000 immigrants from there, more than half of whom keep shops in C ward, whereas in 1891 the total immigrants into the Presidency from Ajmer-Merwára amounted to less than 2,000.

Immigration from outside.

One more important source which Bombay taps is Goa. As is to be expected, the principal occupation of the 30,000 Goanese is domestic service. They are well distributed throughout the City but are found in the largest number in C Ward.

12. Of those born outside India nearly 6,000 come from the United Kingdom, over 2,000 each from Persia and Arabia and 1,000 from Afghanistan. With the exception of our own nationality the remaining European nations are but poorly represented; Germany with 257, Austria-Hungary with 206, Italy with 175 and France with 135 being the principal contributors. Full proportionate details of immigrants by wards will be found in Subsidiary Table V at the end of this Chapter.

Europeans.

13. The proportion in Bombay-born has decreased from 23 per cent. in 1901 to under 20 per cent. This is not difficult to understand. In the plague exodus of ten years ago the immigrants who had homes near by to go to and who had only come in search of casual employment, naturally returned to them. The Bombay-born having no other home to go to, stayed where he was, or if he was wise removed to a plague camp in Mahim, Sewri or Sion. In either case he came within the enumerator's net. With the absence of dislocation from plague on the present occasion the foreign-born reasserted their supremacy.

Decrease in Bombay born.

SUBSIDIARY TABLE IV.

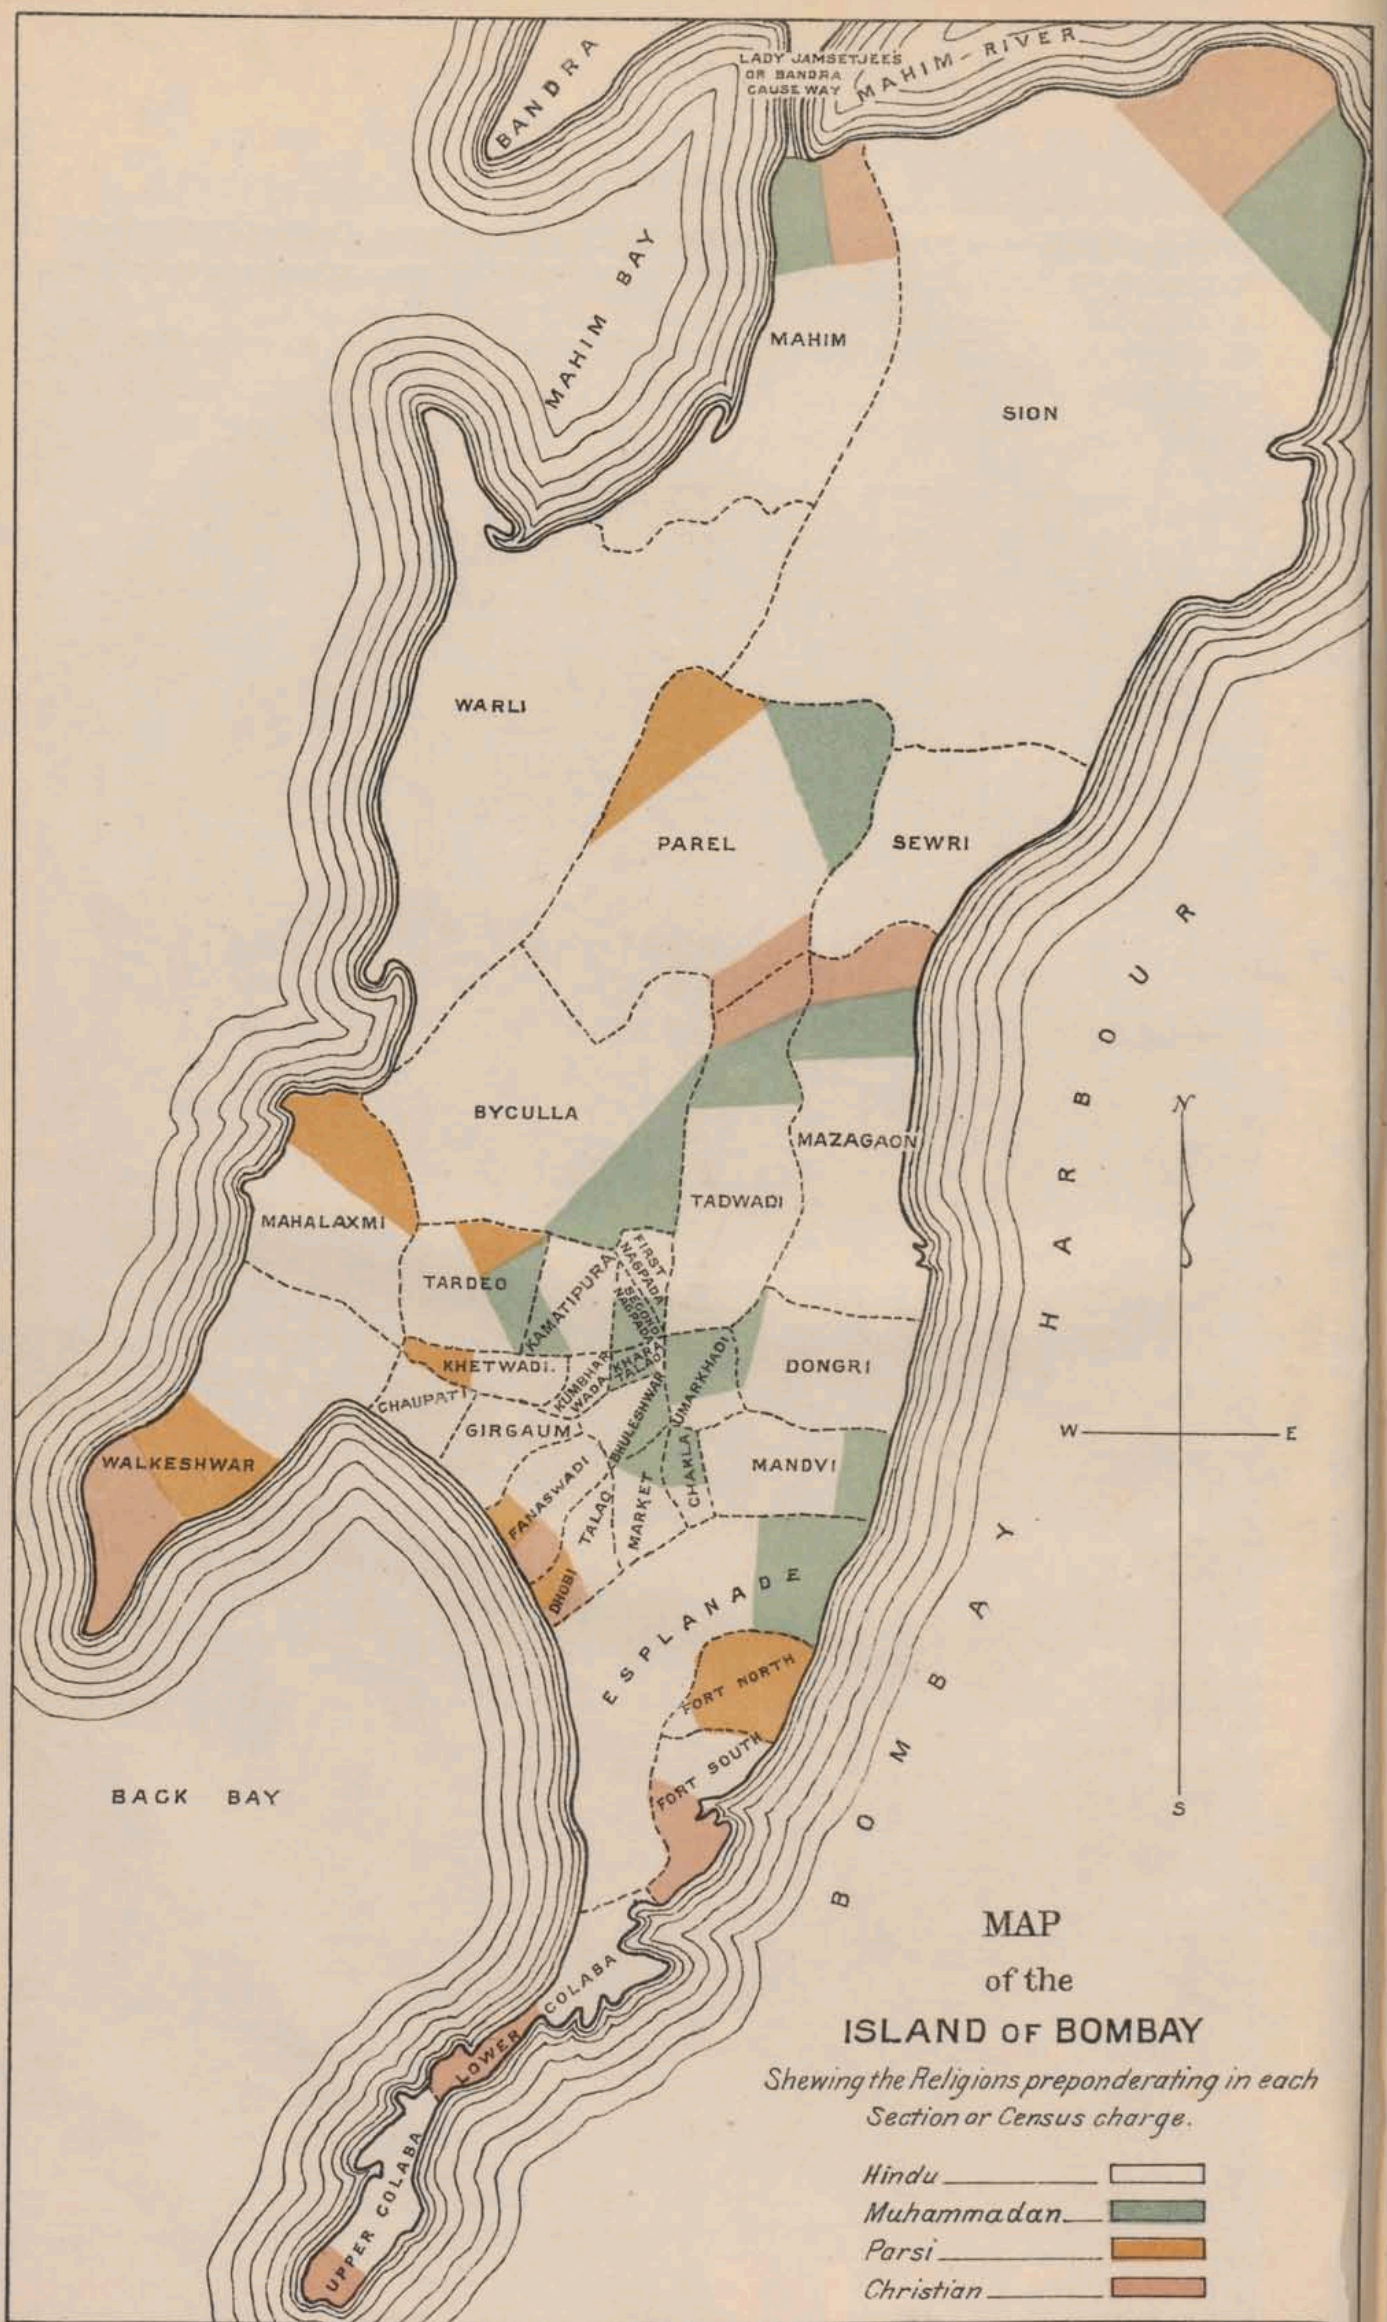

Showing the percentage of Increase (+) or Decrease (—) by Sections.

Section.	Variation per cent. since 1872.
Upper Colaba	— 53.49
Lower Colaba	+ 48.49

CHAPTER III.

RELIGION.

14. Table III contains the details of the various religions followed by the inhabitants of the Island, and an attempt has been made to represent the same pictorially in the map in the opposite page. It must not however be thought that the location of each religion shown in a section is exactly where it is depicted. For instance the Parsis of Parel are not all huddled up in the

The religions of
the Island.

Table showing strength of each religion.

Religion.	Population.	Percentage of total population of Island.
Hindu	664,042	67.80
Musalman	179,346	18.31
Christian	57,355	5.85
Jain	20,460	2.00
Zoroastrian	50,931	5.20
Jew and others	7,311	0.75

north-western corner of the section, nor are they separated by a deep gulf of Hindus from the Christians who are closing up with their co-religionists of Tadwadi. All that is meant by the colouring is that the coloured area represents proportionately the strength of the two or three principal religions in each section which may be either widely diffused throughout the area or closely massed in one locality. The percentage and population of each religion will be found in the margin.

Hindus constitute 68 per cent. of the total population, Muhammadans 18 per cent., Christians 6 per cent. and Zoroastrians 5 per cent. Two per cent. of the remainder are Jains and 1 per cent. Jews and others.

Whereas in 1901 Hindus had decreased from 66.1 to 65.5 per cent. of the total number they have now increased again to 67.8. A large portion of this increment must be due to the return of plague refugees. Hindus are represented in strength in every section and practically monopolize Warli, Sewri, Kumbharwada, Girgaon and Chaupati.

The Muhammadans now represent 18.31 per cent. of the people, a slight falling off from the 18.9 that they constituted in 1891 and a good deal less than the 20.07 that they registered in 1901. But as stated by Mr. Edwardes when others ran away from the plague they stood firm. They are to be found in greatest strength in the crowded quarters of Second Nagpada, Khara Talao, Umarkhadi, Chakla and Byculla. The number of Musalmán women per 1,000 males has fallen off from 617 to 507 which shows that either many of the unattached fled in 1901 or that many men unaccompanied by their womenfolk have since entered the island. The followers of Islam are weakest in Girgaum and Fanaswadi where they do not amount to 1 and 2 per cent. respectively.

The Christian and the Jew are gaining ground at the expense of the Parsi, slowly of course, but the advance is perceptible as the subjoined figures will show :—

	1881.	1891.	1901.	1911.
Christian	5.5	5.5	5.8	5.85
Parsi	6.3	5.8	5.9	5.20
Jew	0.5	0.6	0.6	0.67

It is not so much that the Christian is increasing as that the Parsi is decreasing. They have the lowest birth rate of any race and their numbers are only kept up by the lowness of their death rate.

Local distribution
of religions.

15. Christians show in greatest number in Fort South, Colaba, Walkeshwar and Dhobi Talao, Mazagaon and Tadvadi, in all of which they exceed 10 per cent. of the population. They are also in strength in the Harbour, Docks and Military sections where they total nearly 5,000. They seem to avoid the Musalman quarter. The homeless Christians have increased from 119 to 186. The home of the Parsis is in the North Fort, Dhobi Talao and Khetwadi, where they number about 25 per cent. of the residents. Their numbers are negligible in B Ward, the Nagpadas and Sewri. The care they take of their poor is evinced by there being only 13 homeless Parsis on Census night.

Jains are found in strength only in the Market and Mandvi, where they constitute 15 and 8 per cent. respectively of the inhabitants. There are also a good number in Bhuleshwar and Umarkhadi. There were only 8 Jains returned as having no homes.

The Jews show an increase of 23 per cent. on the figures of 1901, but there has been a falling off in the proportions, so that it is possible that many males retired to their homes in Kolaba or Janjira, where the Bane Israel are numerous, on the outbreak of plague in 1901. They are found in largest numbers in Umarkhadi, Byculla and First Nagpada, but except in the last named, where they constitute 12 per cent. of the population, they are not numerous enough to affect the sectional totals.

Minor religions.

16. It remains to give a hasty glance at the other religions returned. There are 578 Buddhists; they show an increase of 50 per cent. principally in Tardeo and Kamatipura. There are only 107 Sikhs, nearly all in Fort North and Walkeshwar. Of weird and uncommon religions less than usual were returned, only 29 altogether. The Brahma and Arya Samaj seem to make but little footing in Bombay, though they are doing better in Sind. The reason is probably that caste rules are so lax in this city that the incentive to shed caste by joining one of these theistic religions is not present.

The number of females to 1,000 males in each religion is shown in the subjoined table.

SUBSIDIARY TABLE VI.

Proportion of females to 1,000 males of each religion.

Religion.						No. of females to 1,000 males.
Hindu	521.21
Musalman	507.31
Christian	486.54
Buddhist	360.00
Jain	329.00
Sikh	150.54
Zoroastrian	902.97
Jews and Others	880.78

CHAPTER IV.

AGE, SEX AND CIVIL CONDITION.

17. The particulars of Age, Sex and Civil Condition are given in ^{Age.} Table IV. Owing to the prevalence of illiteracy the age return is very inaccurate, and there is a marked tendency to plump on round numbers which is not unknown in Europe. All multiples of ten are favourites, in a lesser degree the multiples of five and of four. In addition to these accidental mistakes there is the case of the Hindu spinster who ought to be married and is over 12 whose age is wilfully 'corrected' to a more decent figure.

The series in a great city owing to the disturbing factors of children being born outside and immigrants being mostly over 20 when they come in is quite different to the age pyramid of the rural areas. In the latter if there are no disturbing factors and the population is either stationary or progressive the largest class should be the age group 0—5, and each succeeding age group should be less than the one preceding it. In a city it is different. Children are born outside and those that are born within the city precincts have a poorer chance of life. Therefore the age class 0—5 is smaller; immigrants come in after the age of 20 and therefore the age classes 20—30 are greater. The series in fact grows to a maximum and then decreases again. One curious fact is that old women are proportionately nearer to old men in number; in the mofussil they actually exceed them. The explanation is said to be that women are notorious for exaggerating their ages, but this theory is somehow not very convincing.

18. So much for the general population. The sex proportions are ^{Sex.} interesting and Subsidiary Table VII at the end of this chapter shows the proportion throughout the several age periods. As in the mofussil, more boys are born than girls, but being more delicate they are in defect during the first four years of life. After that, however, males are always the more numerous. The disproportion is very great between the ages of 10 and 50, the females frequently not amounting to 50 per cent. of the males. The causes are as follows:—

- (a) There is a natural defect in women in the age class 10—15, due to early marriage and premature motherhood and unskillful midwifery;
- (b) when on the top of this women are sent away to their fathers' homes for their *accouchement* this defect becomes still more pronounced; and
- (c) the disparity is increased by the immigration of able-bodied males who have not brought their women-folk with them.

There is a curious proportion of the sexes at age period 20—25. In the mofussil women are actually in excess at that age, though they quickly revert to inferiority, and the same tendency is to be seen, though equality even is not reached, in the figures for Bombay. What the explanation is it is difficult to say. One might hazard a guess that the age period 20—25, when the young man is going out into the world or when the young able-bodied stranger enters the city, is the great change in his life as maternity is in a woman's, and that the change proves too much for him.

Sex proportion
by religion.

19. The sex proportions of the different religions are given in Subsidiary Table VI at the end of the last chapter. It will be seen that the Pársis with 903 per 1,000 are easily first. They are inveterate town dwellers and their women probably hold a position with regard to men which is only equalled in the European races. There is no early marriage and there are excellent Pársi hospitals and maternity wards, all of which are factors in prolonging female life.

The Jews are very similarly situated, and the race has always been known to have a large proportion of females, and is permanently established in Bombay.

A long way behind comes the Hindu. These figures, as well as those for Muhammadans who come next, are kept low by the large number of immigrants. Probably, if the natural population only were taken, the positions of the Hindu and the Musalmán would be reversed; widow-marriage and adult marriage generally lead to a higher percentage of females amongst Muhammadans than amongst Hindus.

The shortage of Christian women is due to the disparity of the sexes among the European and kindred races, in which the males outnumber the females by two to one. With the Armenians—there are only 39 of them—the disparity is nearly three to one, and the Anglo-Indian community is not strong enough numerically to help in redressing the balance. The Goanese too does not bring his wife to service in Bombay.

The shortage in Jains is due to their being mostly birds of passage, who come down here to make a living by shop-keeping, and then return to Rájputána or Gujarát. The bulk of them do not make their homes here.

The other religions are too poorly represented to be worth examining.

There are 853 females per 1,000 males among the city-born and 529 among the foreign-born population.

Sex proportion
by locality.

20. Subsidiary Table VIII shows by sections the proportion of females to 1,000 males and the same is represented pictorially in the map opposite this page.

The sex proportions in Upper Colába are a little difficult to understand, but it must be borne in mind that the troops are not included in the section but are classed with the harbour, docks, railways and homeless population. In Máhim the high proportion of females is due to the residential portion being largely agricultural, while the railway construction with its female carriers of earth that was then in progress in the north of the island is responsible for the figures in Sion. Both these sections also are havens of refuge for the Bombay-born, among whom the proportion of females is comparatively high. In the next class—from 600-650 per acre—Sewri has a large number of females on account of reclamation work; Dongri, Umákhádi, Kámátipura and Second Nágpáda have many low-caste Hindus which always means a high proportion of females; Khetwádi and Tárdeo are large industrial centres in which women also are employed; Chaupáti and Girgaum are residential areas and Fort North is a Pársi area; Fort South, a mercantile and non-residential shopping centre, has naturally fewest females.

21. Let us now examine the civil condition of the whole population. Civil condition.

Number per 1,000 of each religion who are				
		Unmarried.	Married.	Widowed.
Hindu	...	31	61	8
Musalmán	...	37	55	8
Christian	...	52	41	7
Jain	...	37	58	5
Pársi	...	54	37	9
Total	...	35	57	9

Thirty-five per cent. is unmarried, 57 per cent. married and 8 per cent. widowed. Details by religion are given in the margin. It will be seen that the Hindu has the largest proportion of married and the Pársi the least. The Musalmán and the Jain, both of whom encourage adult marriage, come next, and the Christian and the Pársi tail off. A curious feature is the absence of Jain widows. Jains

do not go in for widow re-marriage and should show a larger number than the Pársis, Musalmáns and Christians who allow it and the Hindus who do not universally disapprove of it.

22. In the marginal table will be found the variations of the population Fluctuations of the last 30 year.

Table showing the unmarried, married and widowed per 1,000 of the population since 1851.					
		1881.	1891.	1901.	1911.
Unmarried	...	336	349	354	345
Married	..	575	565	548	573
Widowed	...	89	86	98	82

as a whole by civil condition during the last 30 years. The fluctuations are extreme, but it will be seen that there is very little change between the figures of 1891 and of 1911. It is necessary to ignore the figures of 1901, as the circumstances were

abnormal, and the decrease in the married is probably due to the higher proportion of Musalmáns enumerated, who have a lower proportion of wives to husbands.

23. Subsidiary Table IX shows the percentage of the population who are married, unmarried or widowed at each age period. Of the 56 infants who are married in the first year of life 42 are Hindus, 11 are Muhamadans; Pársis, Jains and Christians have one representative each. It may be noticed that there are 79 Christians under the age of 10 who are married. It may possibly be that they (or rather their parents) are recent converts and that the marriage was celebrated before their conversion. But if this theory is incorrect these early marriages show the influence of Hinduism on the other religions which are found in its midst. There are 25 per cent. more married Christians at this age (0-10) than Pársis. Civil condition by religion.

Of child-widows there are 80 under 10, and 23 widowers. Hindus, 65 and 19, provide the bulk of them. There are three Pársi and three Christian widows and 9 Muhammadans.

SUBSIDIARY TABLE VII.

CHAPTER V.

EDUCATION.

24. Details of Education will be found in Table V which also combines Reference to table. in one table religion and age. The age periods selected are those mostly concerned with education :— 0—10, when the child is hardly commencing schooling, 10—15 and 15—20 when he should be hard at work, and 20 and over when his primary education is presumably finished.

25. On the present occasion a rather important difference in the definition Scope of the statistics. of literacy has affected the figures materially. In 1891 a distinction was drawn between the literate, the learners and the illiterate. In 1901 the triple division was discarded and literacy was defined as the ability to read and write any one language. In 1911 the standard of literacy was fixed and the words 'a letter' inserted after 'write'. A small difference, but it wiped out the man who could only sign his name, the man who could only read a printed book and many school children in the elementary and infant classes.

In spite of the more stringent definition 23 per cent. (nearly) were returned as literate. This compared with the 19·06 per cent. of 1891 is quite a satisfactory result. Literate males represent 18 per cent. of the population and literate females 5 per cent., and 28 males in every hundred males and 12 females in every hundred females are literate. Some further details by age periods will be found in Subsidiary Table X.

26. The followers of the Zoroastrian religion show the highest figures of Education by religion. literacy with 74 per cent. There are only 13,477 Pársis who are unable to read and write a letter, of whom quite a half are still under instruction. There are still a few old conservatives who are illiterate, but the age group 20 and over should show practically no illiterates in 1921. Two Pársi females in three are literate.

Next to the Pársi comes the Jain. A trader by profession and hailing from Gujarát, the most literate division of the Presidency, it is natural that he should stand high on the ladder of education. Seventy per cent. of their males are literate, but only 16 per cent. of their women. Of the sexes combined 57 per cent. are educated.

Just half the Christian population can read and write a letter. The difference in education between the women and the men is small, 54 per cent. of the males and 41 per cent. of the females being literate.

The Jew shows nearly the same figure, but is weaker in respect of literate females.

The Hindu and the Musalmán are nearly side by side at the foot of the ladder, with the Musalmán slightly the worse in position on account of the backwardness of females; the proportion of literate males to the male population is the same in both races.

27. In English education the Christian with his foreign born nucleus Literacy in English. naturally comes first with 40 per cent., closely followed by the Pársi with 39. The Jew shows 32 per cent. and then comes a wide gap before we come to the

Jain with 6, the Hindu with 5 and the Musalmán with a good deal less than 3 persons in every hundred capable of reading and writing an English letter. For the City as a whole, 83 persons in a 1,000 are able both to read and write English compared with 70 *per mille* in 1901. These figures show the great progress made in education, both English and Vernacular, male and female during the past *decennium*.

Religion.	Literates per 100 co-religionists.		Literates in English per 100 co-religionists.	
	1901.	1911.	1901.	1911.
Hindu	11	17	3	5
Musalmán	13	16	2	3
Christian	52	50	46	40
Jain	52	57	2	6
Zoroastrian... ..	67	74	31	39

The progress during the decade made by the followers of the different religions both in literacy and in knowledge of English is seen at a glance in the marginal table. The Pársi and the Hindu have made most progress while the Christian has retrograded.

SUBSIDIARY TABLE X.

CHAPTER VI.

LANGUAGE.

28. On the present occasion the language details were not compiled for each section, and the figures available are for the City as a whole and are reproduced as Subsidiary Table XI at the end of this chapter. Principal vernaculars of the City.

The principal language is of course Maráthi. With such a large immigrant population from Ratnágiri, Kolába, Poona and Sátára it could be nothing else. Maráthi includes the dialects of Konkani, Gomántaki and Firangi.

Next in importance is Gujaráti which is the commercial language of Bombay and is spoken by 21 per cent. of the population.

Hindustáni ranks third. With Western Hindi, of which it is a branch, the speakers number 15 per cent. It includes the dialect of Musalmáni and is spoken by the 50,000 immigrants from the United Provinces and many other Muhammadan tribes. The Konkani Musalmán of mixed Arab descent, who is numerous in Bombay, speaks Konkani, not Hindustáni. The only other language of numerical importance is Sindhi, in which is included Kachchhi, the language of the Memons, the Khojás and the Osvál Vánis. It is very difficult to place Kachchhi. Sometimes it has been classed as a Gujaráti, sometimes as a Sindhi, dialect. It is in reality a separate language, half way between Gujaráti and Sindhi and in conformity with the geographical position of its land of origin.

Speakers of Kachchhi number 25,925 males and only 14,542 females; apparently the immigrants from Cutch, mostly shopkeepers, do not bring their wives with them.

29. Nearly 20,000 speak English in their homes as compared with 16,000 English who have returned themselves as European and Anglo-Indian by race. The balance are probably Indian Christians of good family and Pársis.

30. Rájastháni is the language of the Márwári shop-keeper, and Portuguese of the few pure Portuguese (there are 33 who have given Portugal as their birth-place) and of the better class Indian Christian from Goa and the mainland of Thána. Outside vernaculars.

Támil is spoken by some 3,000 persons and Telugu by about 8,000, most of whom live in Kámátipura and hail from Hyderábád State.

Arabic spoken by 2,900 individuals is almost entirely a language of the docks and of those whose life is spent on ships, and the same is true of the 50 odd persons who talk African languages.

CHAPTER VII.

INFIRMITIES.

31. The four infirmities of which the Census took cognizance were the same as on the last occasion, insanity, deaf-mutism from birth, blindness and leprosy. The figures, which were not compiled by sections or wards, are to be found in Imperial Table XI of the Provincial Census Report (Vol. VII, Part II). Details of the afflicted.

The total number of afflicted was 1,364, distributed as follows :—

Infirmity.	Persons.	Males.	Females.
Insane	225	152	73
Deaf-mute	180	130	50
Blind	453	324	129
Leper	506	352	154
Total	1,364	958	406

There has been a decrease of 79 infirm since 1901. Insanity has decreased 41, deaf-mutism 5 and blindness 6 per cent. On the other hand lepers with an increase of nearly 3 per cent. are now the most important infirmity.

32. The insanity figures are slightly misleading owing to the number of Europeans in the Colába Asylum. This being the only European asylum in the Presidency many of the inmates are not really Bombay residents but come from the mofussil. Insanity.

33. There are almost certainly more deaf-mutes than figure in the return. This is a congenital infirmity, which cannot be developed, except by mutilation, and the age figures should show a descending series, but the maximum is not reached until the 10—15 age group. Parents are naturally averse to returning their children as deaf and dumb so long as there is any chance of speech, but the 29 infants in the Presidency (figures were not separately abstracted for Bombay City), who, being below the age of one year, have been returned as deaf-mutes cannot have given any indications that they would eventually remain so all their lives. Presumably if they were only deaf they would come within the definition as they would hardly have got the power of speech by then and the intelligent enumerator would promptly enroll them as infirm. Deaf-mutism.

34. Blindness is largely caused by ophthalmia which itself is generally a disease of dirt. It is most prevalent in Sind, Pálanpur and Cutch where it reaches the extraordinary figure of 348 per 100,000. The prevalence in Bombay City which works out to 46 per 100,000 is therefore satisfactory. Blindness.

35. The increase in leprosy is in common with the general increase throughout the Presidency. It is not due to an increase in the number of Leprosy.

lepers detained in the Acworth Asylum at Mátunga which shows an actual decrease from 363 to 294. It is commonest in the Deccan districts of East Khándesh and Sátára, not prevalent in the Karnátak and rarely met with in Sind. As Sind and the Karnátak do not send many emigrants to our City it may account for the incidence of leprosy in the population being some 37 per cent. higher in the City than in the Presidency at large. There is, however, always a tendency for the infirm to collect in a wealthy city where private charity is largely dispensed. The Leper Act was extended to the Island of Bombay after the census was taken, so it is too early yet to secure results.

The causation of this loathsome disease is still unknown. It cannot be caused only by eating rotten fish, as Bráhmans are not immune though none of them, not even the Shenvis, eat dried fish. On the other hand the Indian Christian is exceedingly fond of sun-dried fish, often badly cured, and it is amongst this race that leprosy is most virulent, though their manner of living and habits of life may have something to do with it.

CHAPTER VIII.

CASTE, TRIBE AND RACE.

36. The principal castes, tribes and races of the Presidency which are represented in Bombay City are shown in Subsidiary Table XII appended to this Chapter. The remaining 99,000 are either castes that are numerically unimportant or immigrants from other parts of the world whose caste or race has no counterpart in this Presidency. At the present census all castes were not compiled for, only those that were either of local or general importance and amounting to at least two per mille of the district or Presidency total. Meaning of the table.

In the case of Bráhmans and Vánis the principal sub-castes only have been shown, the remainder being collected together under the heading "others." As the basis of the table is religion, castes, which occur under two religions like the Khattris and Telis who are either Hindu or Musalmán, and the Shrimáli and Osvál Vánis, who may be either Hindu or Jain, find a place under both religions.

37. In numerical supremacy no caste can touch the Marátha who with 231,000 easily heads the poll. Under this head are grouped together both the Deccani and the Konkani branches of the Marátha tribe, while the Kunbi Marátha is shown separately under Kunbi, in which latter group are also included some of the Gujarát Kunbi sub-castes. This is an increase of 17,000 on the totals of ten years ago but that total included Kunbis.

38. Next come the Sheikhs with 74,000. These include a variety of Muhammadans, many of whom are recent converts. One numerous and important tribe, the Konkani or Naváyats, do not appear in the return, but must be included in this category, though their conversion to Islam dates back before the time of their peaceful entry as Arab traders into this country. They have decreased 15,000 since 1901.

39. The Mahárs, Holiyas or Dheds, who represent the untouchables under names which vary according to the locality from which they come, are third on the list with 58,000. They fall into two classes, the Surati Dheds who earn a living as butlers and hamáls to the European community and those from the Deccan who work as mill-hands. Both of these classes are rising superior to the position to which they have been relegated by the Code of Manu. They have increased 11,000 or 23 per cent., and are in addition materially prosperous.

40. The Parsis come fourth with 51,000, an increase of 10 per cent. This increase is entirely due to a lower mortality rate and immigration; the birth rate is declining.

41. Bráhmans of various denomination amount to nearly 54,000, of which the leading sub-caste is the Gaud Sársvat. This term includes also the Konkani speaking Sársvat (not to be confused with Sarsudh or Sársvat Bráhman of Sind and the North). These two groups are again apparently coalescing after a schism, it is said, of four hundred years. The amalgamation

is not yet an accomplished fact, but it is understood that the intellectual leaders of both communities desire it. The movement has been afoot for the last three years but as yet there has been no intermarriage.

Vánis.

42. There are just over 36,000 Hindu Vánis and just under 20,000 Jains of the same functional group. The difference of religion is curiously enough not a bar to marriage. This is a large increase, 24 per cent. on the figures of 1901, but it is believed that large numbers of Jains left the City in that year on account of the plague.

Bhandáris.

43. The Bhandáris, Konkan dwellers from Ratnágiri and Kolába, many of whom sail country craft coastwise, have increased 71 per cent. and show the most rapid growth of any of the important castes. They now number nearly 29,000. The Chámhbárs and Mochis, the leather workers of the City, have increased 15 per cent.

Weaving castes.

44. The local weaving community, the Bhavsars, Kshattriyas and Koshtis of 1901 have increased over 50 per cent. In view of the development of the textile trade this is not surprising. The first-named are not weavers but have been mentioned here as being calico-printers; they are closely connected with the manufacture of cotton goods. Owing to every caste not being returned this time it is a little difficult to check progress; probably the increase is even greater.

Kolis.

45. There is a decrease of nearly 25 per cent. in the Kolis. Koli is such a comprehensive term embracing the members of a ruling house, wild jungle tribes and the fishermen of the mainland and of the seven isles of Bombay itself, that it is rather difficult to say where the falling off has been. If one might hazard a guess it is probably among the Gujarát Kolis who must have migrated in numbers from the famine in their own country in 1901 whereas there was not the same inducement to leave their homes in 1911.

Lohánás.

46. The great trading caste of Lohánás has increased 35 per cent. They appear to have migrated in great numbers from Surat and Cutch, both of which areas show a heavy loss since last census. The Cutchi ones appear to have left their wives behind; there are actually 1,300 more Loháná women in Cutch than men.

Sonárs.

47. The last of the important caste is the Sonár. As their homes are mostly in Surat and the Konkan they probably fled in large numbers from the plague in 1901. They have of recent years aimed at recognition as Devadnya Bráhmans, but the voice of public opinion is against their claim.

Musalmán.

48. Of the Musalmán trading tribes the increase in number of the Bohoras and Khojas is counterbalanced by the decrease amongst the Memons.

Jews.

49. The Jews have increased 29 per cent. About three-quarters of them are Beni-Israelis who are very numerous on the seacoast of Kolába and the Native State of Janjira.

Europeans and kindred races.

50. Turning to the European population the figures of which will be found in Table VIII it will be seen that Europeans have decreased slightly, a matter of 400, and Anglo-Indians have increased by 930. Armenians have fallen from 72 to 39. It is believed that the Armenian business man feels the competition of the Parsi excessively, is gradually being pushed out and is migrating to Calcutta where the game of business is not played so keenly.

CHAPTER IX.

OCCUPATION OR MEANS OF LIVELIHOOD.

51. There were some important differences in the occupational columns of the schedule compared with 1901. An attempt was then made to ascertain the home occupations of the huge immigrant population. In 1911 this attempt was given up and the schedule did not differ in the occupational columns from that in use in the mofussil. There were three columns dealing with occupation, one for the main occupation of actual workers, another for their subsidiary occupation, and lastly a column for dependant's means of subsistence. Differences in Classification. 1901-1911.

In addition, an industrial census was taken of all concerns which employed more than 20 hands on the 10th March. The schedules were, however, filled in by the heads of the businesses themselves though they were afterwards collected by the regular census staff.

The results of this census are to be found in Imperial Table XV-E, printed in Vol. VII, Part II.

Another important improvement on this occasion was the adoption of Dr. J. Bertillon's scheme of classification. The objection to the 1901 classification which extended to 520 groups was its extreme minuteness, which was unsuited to the economic conditions of India as well as impossible to work with the very vague information that was available from the schedules. The great obstacle to a change is that it vitiates comparison with former census figures. But the classification now adopted was similar on broad lines to the classification of ten years ago, and it was therefore possible by taking proportionate figures to subdivide fifty or so groups that did not tally accurately. There are 169 groups in the present classification divided into the four main classes, raw-material, manufacture, distribution and miscellaneous.

52. The statistics are to be found in Table VII. In the City of Bombay 596,000 persons are workers or 61 per cent. and 383,000 are dependants. Agriculture, which bulks so large in the statistics of occupation for the Presidency generally, only supports 20,000 persons, of whom 5,600 are growers of special products, such as the cocoanut-gardeners of Mahim, and 3,900 are dairy farmers. Details of occupations. Agriculture.

53. Fishing supports 5,000 persons, while a solitary individual lives by hunting. He must have been a stranger caught unawares in the enumeration as the days of Bombay as a game preserve are long past. Fishing and Hunting.

54. Of extraction of minerals there is very little; those who figure in group 16 are mostly coal-brokers, while in group 18 are the 1,300 who are dependent on quarries of lime-stone and building materials. Extraction of Minerals.

55. The importance of the textile industry is well shown in this table. There are 93,000 workers in textiles in the City and 174,000 are dependent on textiles for a livelihood. Twenty-two per cent. of the Hindu population is dependent on this industry, 13 per cent. of the Musalmán, 6 per cent. of the Parsi, 1½ per cent. of the Christian, and less than 1 per cent. of the Jain. The last named, however, is not a producer but a retailer, so it was not to be expected Textiles.

that he would have a large share in cotton manufacture. The bulk of the textile industry is centred in cotton spinning and weaving.

Leather.

56. Industries connected with hides and leather support 2,300 persons. With the exception of 260 Hindus the trade is almost entirely in the hands of the Muhammadan. The leather trade of India is chiefly centred in Calcutta and Karáchi, and hides do not come along in large numbers to Bombay.

Timber, pottery, chemical products, food.

57. About 3 per cent. of the population is dependent on the timber trade, mostly in the fashioning of timber and carpentry, while 14,000 are dependent on metals.

Of potters and brickmakers there are just one thousand, nearly all Hindus.

Chemical products, chiefly the oil trade, employ only 522 persons and food industries 16,000. Of these the butchers, who are mostly Musalmán, form the largest section, followed by the sweetmeat workers, a Hindu trade.

Dress.

58. Hindus, Christians and Muhammadans take up nearly all the dress trade, the first named having by far the greatest share. It will be noticed that washing clothes is not such a female occupation as it is in Europe. There are four female barbers amongst the Muhammadans.

Building trades.

In the building trade which supports over 12,000 individuals the Hindu again asserts his numerical superiority, with a 50 per cent. advantage over the Musalmán.

Boat-building.

60. Boat-building is apparently not a flourishing trade. Whereas Parsi names are intimately connected with the building of the old Indian Navy, there is now not a single Zoroastrian engaged in ship-building or boat-building. Musalmáns with 21 workers, all males, have a virtual monopoly of this decayed industry.

Literature, Arts and Sciences.

61. Two-thirds of the printers and nine-tenths of the jewellers are Hindus, the Parsis with 1,600 coming second in the printing trade and Musalmáns second in the jewellery line.

Transport Industries.

62. Nearly 50,000 are connected with the harbour works, dockyards, and ships and all the miscellaneous marine occupations which are grouped under the head of Transport by water. 36,500 are dependent on road transport, including the upkeep of the roads, and messengers and 31,500 get a livelihood from the railways while the Post Office and its now amalgamated sister services the Telegraph and the Telephone support another 5,500. Altogether 12½ per cent. of the population are supported by Transport industries.

Banks and export trade.

63. In the Banking business which supports nearly 8,000 persons the Hindus show the way, followed by the Jains, and then the Parsis and the Musalmáns and Christians last. The Musalmán however ranks second to the Hindu in the matter of export trade and brokerage, though he is a long way behind the latter.

Trade Textiles.

64. As one would expect the principal branch of trade is in textiles which supports 19,000 persons, the Hindus being twice as numerous as the Musalmáns. Metals support twice the number who live by wood, and there is

a single individual who returns his trade as pottery. Probably there are many others who are sellers of pots and not makers as well.

65. Hotels, cookshops and the like are doing well but the successful ones are the large body of men who cater for the requirements of the Indian and not the population of the European hotels. Hotels, Cafes,
Restaurants.

66. Of the 44,000 who exist by trade in food-stuffs it is rather curious to find that one-fourth are dependent on the sale of vegetables, fruit and spices, while another one-fourth live by grain-dealing. Twenty-three per cent. are dependent on salt, vegetable oil and similar groceries, and 11 per cent. on the sale of dairy produce. Fish dealing, it may be noticed, is a female occupation, the females engaged in it outnumbering the males by 4 to 1. Food-stuffs.

67. Of the other trades the most important is fuel, with 6,500 dependent on it. There are 8,000 persons who deal in articles of luxury, 5,000 of whom are jewellers. Order 41 is the order into which all those trades which are insufficiently described are placed. This would have been very much larger if it had not been for the Commercial Directory which was of use in clearing up many doubtful and ambiguous entries. Other trades.

68. We now come to the public administration. Of the 2,930 soldiers who constitute the Army in Bombay, 1,057 are Hindus, 482 are Musalmáns and 1,358 are Christians. The Navy is almost entirely Christian. The Police force with the exception of 103 Englishmen is largely Hindu, though there is a good contribution of Muhammadans. Public Adminis-
tration and the
Liberal Arts.

Of those dependent on administration 10,000 were in the service of the State and 10,000 in Municipal service.

It is rather a surprise to find that Religion supports nearly 8,000 where Law only protects 3,000. The number of Parsi ministers of religion is 733, which appears to be rather a large number to look after the spiritual welfare of 50,000 people. Doctors, dentists, and the like number with their dependants 6,600; many of them are women.

School-masters and professors number 2,169 and the actual workers (male) in the Letters and Sciences number 5,850, half of whom are Hindus.

20,500 persons are not obliged to work for their living.

69. Of the 264,000 classed under this sub-class, domestic service accounts for 72,000, and the balance consists almost entirely of the insufficiently described. This is rather more than should be shown in this order but it is good evidence of the difficulty the enumerator feels in recording occupation. It must be remembered also that the schedules in Bombay City were all in English and many entries were therefore written unintelligibly when they could have been quite easily shown in the vernacular. Frequently it was necessary to retranslate the English back literally into the vernacular to ascertain what the entry meant. One entry that occurred was "a seller of bad things" which with a little puzzling out resolved itself into the 'old clo' man! Class D—
Miscellaneous.

The sweepers are nearly all Hindus.

The number of the unproductive and disreputable classes amount to 12,000, about $1\frac{1}{4}$ per cent. of the population returned.

CHAPTER X.

SPECIAL BOMBAY TABLES.

70. Tables IX to XV are special tables compiled for Bombay City with the intention of casting some light on the housing problem and showing the areas where overcrowding is most common. Some statistics of overcrowding and size and nature of buildings.

In the last Census Report Mr. Edwardes went into the matter of figures in great detail, section by section. The Improvement Trust had then been only recently constituted and this information was of considerable value to it. But now more than ten years have elapsed and the Improvement Trust officials are in a better position to know the details and to analyse the figures shown up by this census than any writer of a report.

Suffice it to say that Byculla and Tadwadi are *par excellence* mill areas, and Dongri and Market are rapidly approaching their figures. There are 4 chals in Mandvi with over 400 persons each, 7 in Umarkhadi, 4 in Tardeo, 6 in Byculla, 6 in Parel and 6 in Warli. Altogether there are 56 chals of this size or over in the City.

76 per cent. of the population lives in one-room tenements. There are over 166,000 of these tenements and the average number of persons per room is 4.47. Persons living in five and six room tenements average 1.43 and 1.45 persons per room.

The reader who is interested in statistics and in the question of overcrowding will find material for thought in perusing the details contained in the tables relating to buildings. To the Improvement Trust those details must be particularly valuable, but they have already carefully scrutinized them and I do not propose to discuss them any further.

TABLE XI.
CLASSIFICATION OF BUILDINGS BY THE
NUMBER OF TENEMENTS.

* NOTE.—The difference between the total of this table and the total shown in tables IX and X is due to the fact that the buildings under construction and those declared unfit for human habitation have been omitted and detached buildings such as servants' quarters, and stables which are rented jointly with a main building are not separately accounted for.

TABLE XI.
